

Methods

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore.

Propensity scores were estimated by logistic regression , checked separately by a sensitivity analysis, and their overlap assessed graphically.

The primary analysis used a mixed-effects model to account for clustering.

A first mention of the same concern , addressed here in the introduction, appears before the main analysis.

We keep this description of the study population exactly as submitted.

Results

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore.

A second, matching adjustment was made here in the results section to keep both mentions of this concern consistent.

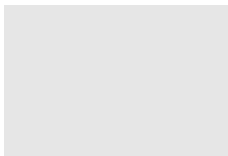

Figure 1: Newly added diagnostic plot.

One participant reported “no symptoms” at the final visit, so was excluded from the per-protocol analysis.
