

Figure R1: A figure the letter adds for its own purposes.

Reviewer 1

Reviewer 1 – comment 1

Please add a subgroup analysis.

Done — see below, still captioned “Figure 2”, matching the manuscript, not the letter’s own “R” sequence:

p. 1 — A subgroup analysis was added in response to the reviewer’s request.

Figure 2: Subgroup analysis, added per reviewer request.

Reviewer 1 – comment 2

Please also report the underlying counts as a table.

Added, still captioned “Table 1”, matching the manuscript:

p. 1 —

A	B
1	2

Table 1: A table, also added.

Reviewer 1 – comment 5

Please add Newton’s second law for comparison.

Added, still numbered “(2)”, matching the manuscript, not a letter-local sequence (equations have no “R”-prefixed letter-numbering the way figures/tables do via with-letter-numbering — nothing to fall back to here besides the shared, ungrouped math.equation counter, same as before this feature existed):

p. 1 —

$$F = ma \tag{2}$$

Reviewer 1 – comment 4

The diagnostic figure looks redundant now.

Agreed, removed — no figure to number here, summary: takes over as before:

Removed: an outdated diagnostic figure.

Reviewer 1 – comment 3

A minor point about Figure 1.

Noted, no change needed — Figure 1 is unaffected. Quoting the passage that discusses it again (it owns no figure of its own, only a reference to one — ordinary @ref resolution, unrelated to this feature):

p. 1 — This passage quotes Figure 1 again but adds no figure of its own — testing an excerpt with a real label that ISN’T locally owned by the quoted passage (the label lives elsewhere in the manuscript, the passage’s own content has no figure at all).
