

Figure R1: A figure the letter adds for its own purposes.

Reviewer 1

Reviewer 1 – comment 1

Please add a subgroup analysis.

Done – see below.

Today’s pinpoint(excerpt: true):

p. 1 – A subgroup analysis was added in response to the reviewer’s request.

Figure R2: Subgroup analysis, added per reviewer request.

Prototype, manuscript-matched numbering:

p. 1 – A subgroup analysis was added in response to the reviewer’s request.

Figure 2: Subgroup analysis, added per reviewer request.

Reviewer 1 – comment 2

Please also report the underlying counts as a table.

Added.

Today’s pinpoint(excerpt: true):

p. 1 –

A	B
1	2

Table R1: A table, also added.

Prototype, manuscript-matched numbering:

p. 1 –

A	B
1	2

Table 1: A table, also added.

Reviewer 1 – comment 4

The diagnostic figure looks redundant now.

Agreed, removed – a deleted figure’s label doesn’t resolve anywhere in the CLEAN manuscript at all (del() emits nothing in clean mode), so there is no “real number” to match here; the summary path (v.summary != none, same as real pinpoint) is what actually renders, never reaching inherit-numbering-strip:

Removed: an outdated diagnostic figure.

Reviewer 1 – comment 3

A minor point about Figure 1.

Noted, no change needed – Figure 1 is unaffected. Quoting the passage that discusses it again, to test a passage whose OWN content has no figure, only a reference to one:

Prototype, manuscript-matched numbering:

p. 1 – This passage quotes Figure 1 again but adds no figure of its own – testing an excerpt with a real label that ISN’T locally owned by the quoted passage (the label lives elsewhere in the manuscript, the passage’s own content has no figure at all).
