

Emulating a target trial of early vasopressors

D. H.

1. Introduction

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magnam aliquam quaerat.

Propensity scores were estimated by logistic regression and their overlap was assessed graphically, following the approach of [1].

2. Methods

The positivity assumption is now assessed graphically, see Figure 1.

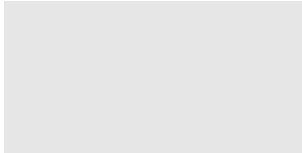

Figure 1: Distribution of propensity scores.

A truncation-based sensitivity analysis has also been performed (data not shown).

3. Discussion

We have kept this wording, which we believe remains appropriate.
