

Response to Reviewers

Bobby Fischer

Bobby Fischer — change 1

Explaining my own first change.

Alice Smith

Alice Smith — change 1

Explaining my change too.

carol

carol — change 1

Explaining my change — note that “carol” here still renders in the same automatic hash color as the manuscript mark, since neither is registered.

Reviewer 1

Reviewer 1 — comment 1

A reviewer’s comment on the first section.

Addressed. (modified on p. 1)

george

george — revision 1

Explaining my change under the overridden words — header should read “... — revision 1”.

Reviewer 3

Reviewer 3 — remark 1

A comment under the new global “remark” word — header should read “... — remark 1”.

Response. (modified on p. 1)

henry

henry

Via `note()`, with a per-call term: `override` — this occurrence should say “aside”, not “revision”.

henry

Via `exchange()`’s two-argument form — same header shape as the `note()` call above, just this call’s own text; no term: `override` here, so it picks up whatever the **ambient** word is at this position (“revision” — the global `override` set above, still in effect).

Cross-references: Bobby Fischer’s revision 1, p. 1, george’s revision 1, p. 1 (both read as “revision” here, the `override` active at this position), and henry’s aside, p. 1 (reads “aside” — the **first** matching `exchange` for this anchor is the overridden `note()` call above).
